ZUBER ALAM
CYBERSECURITY STUDENT | VAPT | SOC | NETWORK SECURITY
zuber.aalam@gmail.com | India | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Cybersecurity student building hands-on experience in network security, Linux, Windows, web security, vulnerability assessment and security monitoring. Experienced through controlled security labs in network traffic analysis, authorized reconnaissance, HTTP testing and simulated incident investigation. Seeking a cybersecurity internship in VAPT, SOC or security engineering.

TECHNICAL SKILLS

- **Networking:** TCP/IP, DNS, DHCP, ARP, ICMP, HTTP/HTTPS, TCP/UDP, NAT, Routing, VLAN, VPN, Firewalls, Subnetting
- **Operating Systems:** Linux, Windows, Bash, PowerShell, Processes, Services, Permissions, SSH, System/Event Logs
- **Security:** VAPT, Web Security, Network Security, Authentication, Authorization, Security Monitoring, Incident Investigation
- **Tools:** Wireshark, Nmap, Burp Suite, tcpdump, Netcat, SIEM, Git, Docker
- **Programming:** Python, Bash, Socket Programming, JSON, Regular Expressions, CLI Automation
- **Web:** HTTP Methods, Headers, Cookies, Sessions, REST APIs, SQL, JSON, Browser/Web Architecture

PROJECTS

NETWORK SECURITY LAB

- Built an isolated virtual network to study TCP/IP, DNS, DHCP, ARP and HTTP behavior.
- Captured and analyzed network traffic using Wireshark and tcpdump; investigated packet flows and abnormal network behavior.
- Performed authorized service discovery and reconnaissance with Nmap and documented exposed services, risks and defensive controls.

PYTHON NETWORK RECONNAISSANCE TOOL

- Developed a Python-based utility for authorized lab environments to perform host discovery and TCP port enumeration.
- Implemented socket-based connectivity checks, command-line inputs and structured output for repeatable reconnaissance.
- Applied networking fundamentals to interpret discovered hosts, ports and services.

WEB SECURITY LAB

- Built an intentionally vulnerable web application to study authentication, authorization and common web vulnerabilities.
- Investigated SQL injection, XSS, IDOR/broken authorization and path traversal in a controlled environment using Burp Suite.
- Implemented server-side security controls and retested the application to validate remediation.

SOC / LOG ANALYSIS LAB

- Created a simulated monitoring environment using Linux and Windows logs to practice security investigation.
- Investigated simulated brute-force, suspicious-process, authentication and data-exfiltration scenarios.
- Correlated timestamps, users, hosts, processes and network indicators to construct incident timelines and recommend containment actions.

SECURITY LABS & WRITEUPS

- Completed hands-on labs covering network analysis, Linux security, Windows security, web security, VAPT and SOC investigation.
- Maintained technical writeups documenting environment, methodology, evidence, findings, impact, remediation and retesting.
- Practiced security tooling in isolated or explicitly authorized environments and followed responsible disclosure principles.

EDUCATION

Bachelor's of Technology – Electronics and Computer Science (B-Tech ECE)

Galgotias University (2026-30)

CERTIFICATIONS & PLATFORMS

- CompTIA Security+ / CCNA – list only after completion.
- TryHackMe, Hack The Box, PortSwigger Web Security Academy, OverTheWire, picoCTF – include profile links when meaningful.

CAREER FOCUS

Target roles: VAPT / Penetration Testing Intern, SOC Intern, Cybersecurity Intern, Security Analyst Intern, Network Security Intern.
